## Value throughout your supply chain

From packing shipments on the loading dock to its return by truck, SpacelInvader is effective for optimising your supply chain through double stacking of pallets. Take a look at how the rack can be used for stacking goods, how it fits in the truck and how it is stacked when not in use.

## Optimizes many kinds of cargo

SpacelInvader can be used to stack and carry longer items that do not fit on a single pallet and goods usually unstackable due to their fragility and odd size. The racks also work with double stacking in cold storage.

## Optimizes both retail and warehouse environments

SpacelInvader can be used to solve warehousing needs and in a retail environment. The rack is a flexible storage solution for quick and easy movement pallets, as well as storing semi-finished items during the production process. In retail, double stacking pallets makes for a more efficient and ergonomic replenishment of stock, as well as optimised storage space.

Optimising retail storage

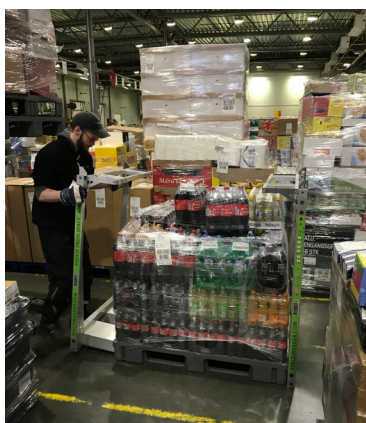

Being used as temporary shelving unit

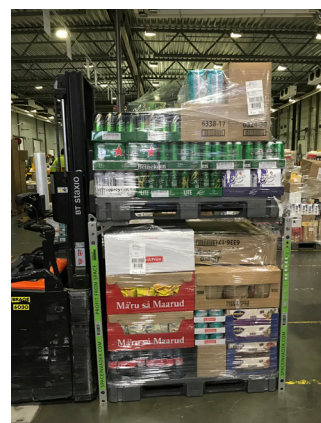

All pallets delivered in best working height for retail personnel

## Problems that SpacInvader can solve

Cargo comes in many shapes and sizes. A lot of it, as shown below, can be stacked better and more securely with SpacInvader. The pallet rack protects fragile and unsecured cargo by dividing and double stacking it. That means reduced breakage during transportation and in storage, as well as more efficient loading and unloading of trucks.

Low pallets take up space on the floor and in transport

SpacInvader – løsning til maksimal godshøjde  
av ellers ustabilt gods

No more time-consuming loading, unloading and  
breakage during transportation

Unstable goods stacked high

SpacInvader – a solution that protects cargo
